CHALLENGE

Challenge

How could technology solve or improve these inefficiencies?

target 8.9

Seasonality
(Demand Asymmetry)

22,3 Million of tourist
(Between July and August)

Spatial Concentration
(Hotspot Saturation)

85% of tourists visit only 10% in Destination
(Rural Mallorca only reach 40-50% of its capacity)

Economic Leakages
(Value Capturing)

134.7 Billions of Euros
(~20 % y 40 % reach SMEs)

CHALLENGE

Desafío

AI-Powered predictive analytics for tourist behavior and demand

target 8.9

El turismo está altamente concentrado, es ineficiente y, en muchos casos, excluyente.

- ¿Puede la Inteligencia Artificial ayudar a redistribuir los flujos y crear experiencias de viaje significativas e inclusivas a lo largo del tiempo y el territorio en España?
- ¿Cómo desplazar la demanda hacia destinos menos conocidos o fuera de temporada sin recurrir a promoción directa?
- ¿Cómo modelizar y visualizar zonas turísticas de alta oportunidad?
- ¿Cómo pueden los datos de reservas y experiencias mejorar la personalización en tiempo real?

TUI CARE FOUNDATION

CHALLENGE

Desafío

AI-Powered predictive analytics for tourist behavior and demand

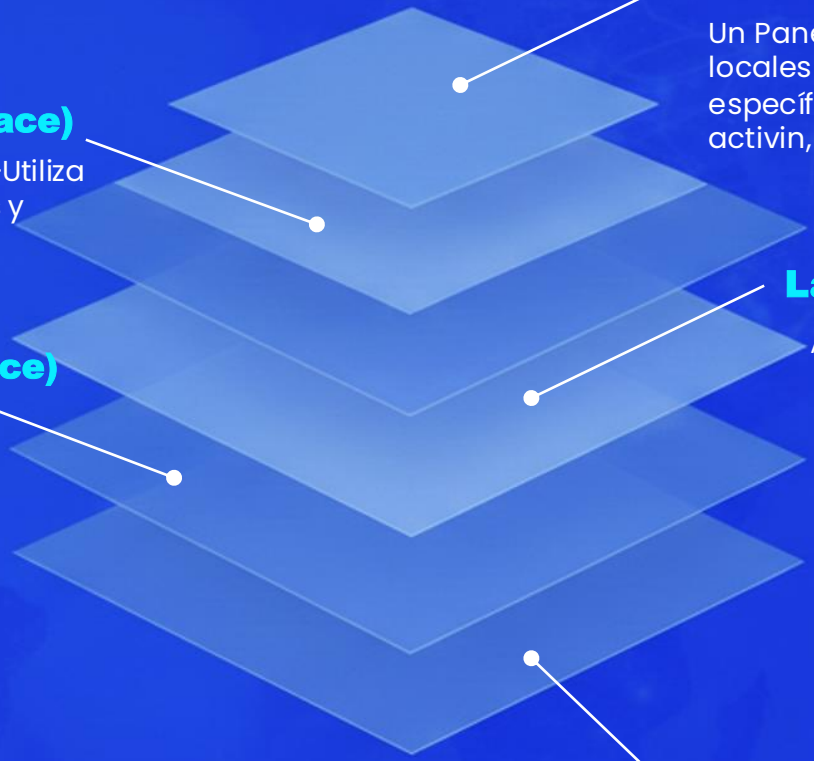

target 8.9

Layer 5 — Governance Layer (The Guardrail)

Un Panel de Control para el DMO donde las autoridades locales— establecen las reglas.,capacidad de carga para sitios específicos, los umbrales de sentimiento de los residentes que activin, preferencia para pymes y Negocios locales.

Layer 4 — Personalization Layer (The Interface)

El "Conserje Invisible" — impulsado por IA conversacional —Utiliza encuadre positivo, recompensas de fidelidad gamificadas y narrativas auténticas para hacer que la mejor opción sea también la más atractiva.

Layer 3 — Intervention Triggers (The Action)

Automacion de sistemas cuando se alcanza un umbral de saturación, para reequilibran las recomendaciones de paquetes hacia zonas alternativas, descongestion de corredores y suppression de marketing para micrositios sobrecargados.

Layer 2 — Prediction Engine (The Intelligence)

Combina patrones históricos de reservas, previsiones meteorológicas, sentimiento en redes sociales y calendarios de eventos usando modelos híbridos LSTM para predecir la "Saturación de Microzonas"

Layer 1 — Unified Ingestion (The Foundation)

Consolida datos abiertos o cerrados del ecosystema turistico e.g. manifiestos de vuelo, ocupación hotelera, reservas de excursiones, sensores IoT de densidad urbana, datos ambientales satelitales
